

Using GHG Emissions Data to Inform Climate Policy

Hear from Colorado sustainability experts, Rachel Meier and Nick Russell, on how they use greenhouse gas accounting to solve today's biggest climate emergencies.

RACHEL MEIER

Senior Associate
at Lotus

NICK RUSSELL

Associate at
Lotus

Rady Lecture Hall 109

September 11, 2023

4:00 PM to 5:00 PM

Understanding how and where greenhouse gas (GHG) emissions are generated is the first step to reducing those emissions. Throughout Lotus' career, they have completed dozens of GHG emission inventories for local governments, nonprofits, utility companies, and private organizations. Guest lecturers, Rachel Meier and Nick Russell, will share how they use GHG data to help their clients develop climate action policies and programs, discuss what the major sources of GHGs are (some may surprise you), discuss ways to communicate the data so it can be easily understood by the public and decision makers, and answer questions regarding GHG accounting.

Refreshments will be served. All are welcome!
